

DEVELOPMENT ROUND PROJECT BRIEF

DURATION: 3 Hours (Build + Deploy)

Participants must **design, develop, and deploy** a functional product within the given time.-----**PROBLEM STATEMENT**

Juniors preparing for placements often lack **structured, reliable, and company-specific interview insights**. Seniors have this information but no centralized platform to share it meaningfully.

Build a platform where **seniors can log in and anonymously share round-wise interview experiences**, helping juniors prepare better.-----**PRODUCT OVERVIEW**

A web platform where:

- Seniors **log in** (to manage their submissions)
- All experiences are shown **anonymously** to juniors
- Experiences are grouped **company-wise and round-wise**

-----**CORE FEATURES:**

1. Authentication (Required)

- Login system (Email / OAuth / any method)
- Users can:
 - Add experiences over time
 - Edit/delete their own submissions
- **Publicly, all posts remain anonymous** (no names shown)

2. Landing Page

- List/grid of companies
- Clicking a company opens its detail page

3. Company Detail Page

Each company page contains **tab-based sections**:

- Online Test (OT)
- Technical Interview
- HR Interview

Each tab displays submitted experiences related to that round.

4. Experience Submission

Seniors can submit experiences with:

- Company name
- Round type (OT / Technical / HR)
- Experience description
- Result of the round:
 - Qualified / Not Qualified
- If qualified: optional details of the next round

-----MVP SCOPE (MUST HAVE)

- Login system with anonymous posting
- Company listing page
- Company detail page with OT / Interview / HR tabs
- Add & view experiences under correct company and round
- Deployed working application

-----ADD-ONS (OPTIONAL / BONUS)

Product & UX

- Advanced company search with autocomplete
- Filters by round type, result, year, role
- Sorting (latest, most helpful, most viewed)
- Upvote / mark experience as helpful
- Bookmark or save experiences
- Rich-text editor (lists, code blocks)
- Dark mode and accessibility support

User & Authentication

- OAuth login (Google / GitHub)
- Private user dashboard
- Edit / delete own experiences
- Draft submissions (save & publish later)
- Anonymous-by-default posting (identity never public)

Moderation & Quality Control

- Report inappropriate or spam content
- Admin / moderator dashboard
- Experience approval workflow
- Duplicate or low-quality submission detection
- Rate limiting per user

AI & Agentic Features

- AI-generated summaries per company & round
- AI-extracted common questions and topics
- Auto-tagging (DSA, OS, DBMS, CN, HR, etc.)
- Similarity detection between experiences
- Chat-based “Interview Prep Assistant” per company
- AI suggestions while writing experiences

Analytics & Insights

- Company-wise stats (OT clear %, interview success %)
- Round-wise difficulty trends
- Frequently asked topics per company
- Year-wise hiring insights
- Visual dashboards and charts

Backend & System Design

- Role-based access (user / moderator / admin)
- Scalable database schema
- Pagination, indexing, and caching
- Secure APIs and validation
- Audit logs for edits and deletions
- API-first architecture

Deployment & DevOps

- CI/CD pipeline
- Environment-based configurations
- Error logging & monitoring
- Performance optimization
- Backup and recovery strategy

Community & Growth

- Comments on experiences
- Follow companies for updates
- Email notifications for new posts
- Contribution leaderboard (still anonymous publicly)
- Public shareable company pages

-----AI USAGE

Use of AI / Agentic AI is **allowed and encouraged**, but optional. It should enhance the product (e.g., summaries, insights).-----**EVALUATION CRITERIA**

- Completion of MVP within time
- Correct flow and data organization
- Clean UI and usability
- Deployment success
- Thoughtful product decisions

-----**EXPECTED OUTCOME**

Evaluators should be able to:

- Open the deployed link
- Log in as a senior
- Add anonymous experiences
- Browse company-wise, round-wise interview insights
-

Community & Growth

- Comments on experiences
- Follow companies for updates
- Email notifications for new posts
- Contribution leaderboard (still anonymous publicly)
- Public shareable company pages

AI Usage

Use of AI / Agentic AI is **allowed and encouraged**, but optional. It should enhance the product (e.g., summaries, insights).

Evaluation Criteria

- Completion of MVP within time
- Correct flow and data organization
- Clean UI and usability

- Deployment success
 - Thoughtful product decisions
-

Expected Outcome

Evaluators should be able to:

- Open the deployed link
- Log in as a senior
- Add anonymous experiences
- Browse company-wise, round-wise interview insights
